Master green space management with AMAZONE's self-propelled mowers

Whether it is well-kept green spaces in parks, the lush grass found in football stadiums, open grassy areas on campsites or around the swimming pool, high-quality riding stables and golf courses – professional lawn care and landscape maintenance can quickly become the focal point of any leisure facility, be it perfectly mown lawns in summer or diligently collected leaves in the autumn.

AMAZONE's ProfiHopper and ProfiMower self-propelled mowers/collectors are up to the task of tackling many of the challenges in lawn maintenance – offering impressive work rates, convenience and ease of operation as well as outstanding reliability and robustness. The ProfiHopper is extremely versatile, whether for mowing and scarifying lawns or for collecting leaves, horse droppings or litter, such as discarded drinks cans and paper cups. The ProfiMower is designed for jobs where cutting and collecting is not required. Mown always with that perfect result, day after day, even with continuous operation from morning to night – perfect for professional green space management.

The ProfiMower concept

Highly efficient mulching across any green space

1. Convenient and comfortable driving position with good "all-round visibility" with canopy as an option
2. SmartCut fine-flail mowing deck or BladeCut rotary mowing deck
3. High-powered diesel engine with modern exhaust gas treatment, including recirculation and particulate filter
4. Intelligent 4WDi all-wheel drive with individual wheel speed control enables 0-radius turn steering
5. Load platform for carrying maintenance materials and tools

PRODUCT FILM
ProfiHopper 1500 Cab

730 or 1,100 l
hopper capacity

1.25 or 1.5 m cutting
width

Up to 11 km/h working speed
and 20 km/h transport speed

Impressive work rates and mown with a perfect result

AMAZONE offers high-quality, reliable, high-performance professional machinery for lawn maintenance and leaf collection which packs a big punch in the shape of the ProfiHopper 1250 and 1500 self-propelled mower/collectors. The ProfiHopper from AMAZONE achieves a perfect result with the SmartCut fine-flail mowing deck in cutting widths of 1.25 or 1.5 m, whether on lawns with short or long grass, large open spaces or small and restricted areas. The auger conveyor system makes sure that the mower does not block, even when mowing in wet conditions. The optional InsectGuard scares insects away before the machine passes over them, ensuring environmentally-friendly operation. The ProfiHopper 1500 and ProfiHopper 1500 Cab can also be equipped with the BladeCut rotary mowing deck in a cutting width of 1.8 m making it ideal for mulching work.

OUTPUT

High performing!

Impressive levels of output thanks to wide cutting widths, large collection hopper and a generous-sized fuel tank in combination with fast transport and working speeds.

The auger conveyor system prevents blockages in the mowing unit, even when mowing in wet conditions.

The rapid emptying of cuttings via the high-lift discharge also reduces downtime.

FLEXIBILITY

Flexible!

Flexible scope of application – from mowing, scarifying and mulching to collecting leaves, horse droppings, rubbish and other debris.

Thanks to the canopy or cab, it is possible to work in any weather, on both short and long grass – the machine for all seasons.

COMFORT

User-friendly!

Convenient operation and control with a high level of visibility from the driver platform, including vibration and noise reduction.

Simple, tool-free replacement of the wing blades and scarifying blades.

ProfiHopper

Fatigue-free working

Mowing deck and auger conveyors

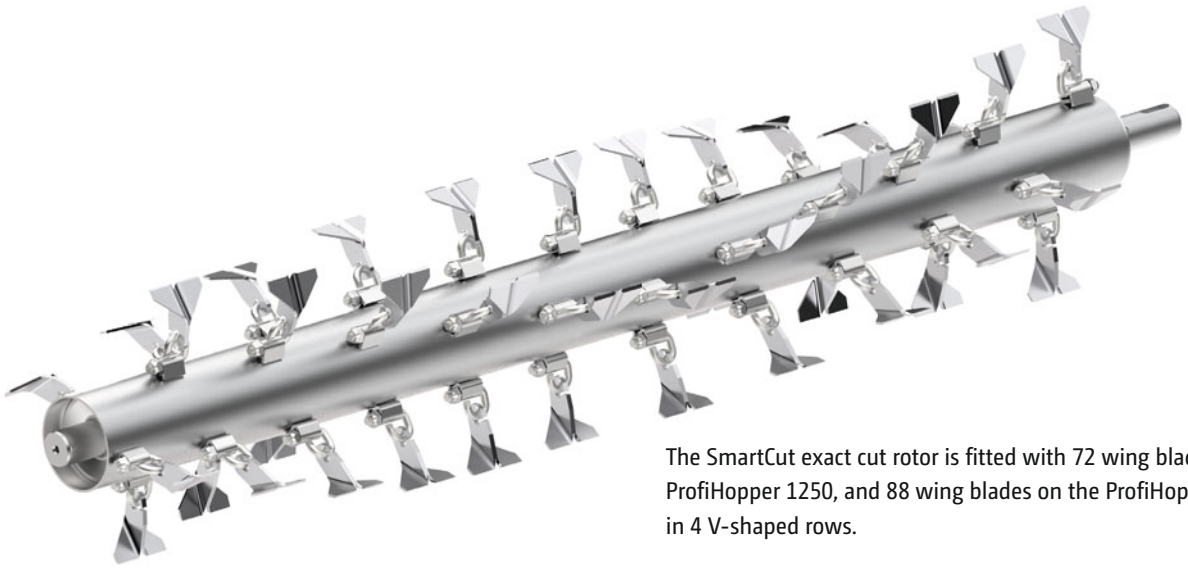

Seeking out alternative methods: AMAZONE leads the way with its SmartCut cutting rotor and PowerCompactor auger conveyor system. Multi-award-winning engineered solutions ensure perfect green space management.

The cutting deck and conveyor section work hand in hand: the heart of the ProfiHopper

The mowing deck and conveyor section are at the heart of the ProfiHopper, which, as a fine-flail mower, enables a significantly better mowing quality and better cutting performance than conventional cylinder or rotary mowers, whilst significantly reducing noise levels.

The wing blades on the SmartCut exact cut rotor – arranged in a chevron format – tirelessly cut the material with millimetre precision at the set cutting height. After collection, the cuttings – grass, wildflowers, leaves, or other material – are transported to the central longitudinal auger by the cross auger in the PowerCompactor system.

This is where the PowerCompactor shows its greatest strength: the cuttings are tightly consolidated during their transport to the rear collection hopper. Due to this compaction by the PowerCompactor, around 45 % more cuttings can be packed into the collection hopper. The ProfiHopper 1250, with a hopper capacity of 730 l, can hold around 1,000 l of compacted cuttings, while the ProfiHopper 1500, with a hopper capacity of 1,100 l, can hold around 1,600 l of compacted cuttings. Compared to mowers without any compaction, the effective collection hopper capacity is significantly increased. With the result that: even less downtime, even more convenience and comfortable working.

The SmartCut exact cut rotor is fitted with 72 wing blades on the ProfiHopper 1250, and 88 wing blades on the ProfiHopper 1500, in 4 V-shaped rows.

The effective collection hopper capacity is increased by around 45 % thanks to the extreme compaction produced by the PowerCompactor.

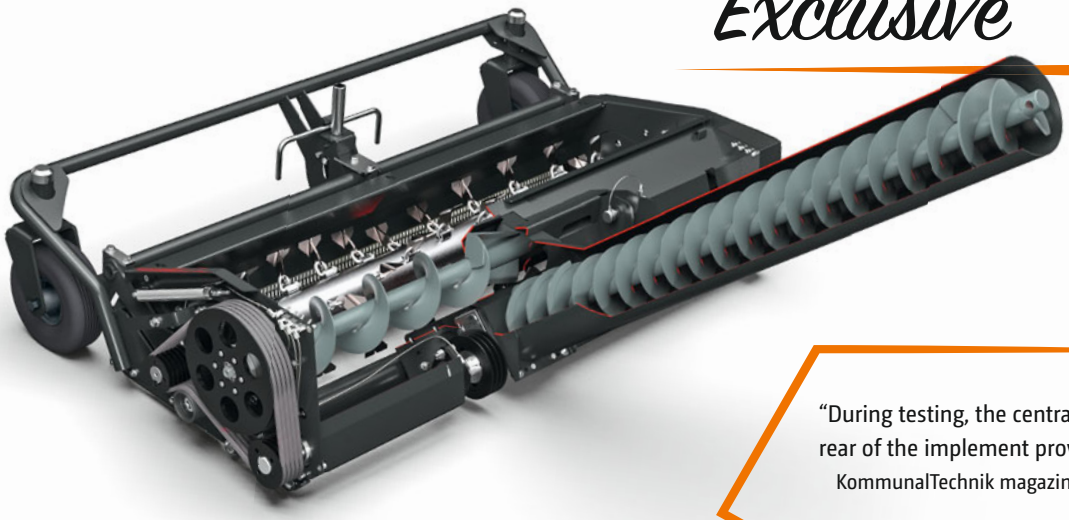

The conveyor section of the ProfiHopper operates without the need for a blower fan or any air assistance. A highly robust, durable solution that reliably prevents any damage to the machine due to its mechanical overload safety device and electronic monitoring, whilst noise and dust generation are reduced as far as possible. Low-noise, largely dust-free operation with maximum impact and a precise profile of cut – convenient and user-friendly. The mower is in a completely different performance class.

If necessary, the mulch flap can be fitted without the need for any tools. The mown and shredded cut material is then returned to the mown area. The BladeCut rotary mowing deck can also be fitted as an option on the ProfiHopper 1500 and ProfiHopper 1500 Cab. Both mowing decks, depending on the specific application, can be swapped over for optimum flexibility,.

The benefits:

- Precise mowing using durable technology.
- Increased capacity of the collection hopper by compacting the cuttings.
- Low noise and dust generation thanks to the auger conveyor system instead of a blower fan.

Exclusive

Direct from the rotor into the auger, "hand in hand"

"During testing, the central grass collection system at the rear of the implement proved virtually unblockable."

KommunalTechnik magazine in practice test: ProfiHopper 1500 Cab – February 2026

ProfiHopper

Safe, comfortable and high up

Collection hopper with high-lift discharge

High-lift emptying with large hopper capacity

Safe emptying is possible at a height of 2.1 m with the ProfiHopper 1250, or 2.5 m with the ProfiHopper 1500, thanks to the high-lift emptying. The transfer point of the hopper has been positioned as far to the rear as possible, so that even high-sided containers can be filled as completely as possible – and all controlled conveniently and comfortably from the driver's seat. It only takes a few seconds – and you can get straight back to work.

All components are easy to get at for cleaning.

The benefits:

- Quick and convenient emptying of the collection hopper
- High-lift emptying at a height of up to 2.1 m for the ProfiHopper 1250 and 2.5 m for the ProfiHopper 1500

Environmentally-friendly mowing combined with insect protection!

The new InsectGuard for the ProfiHopper and ProfiMower protects insects by means of a tine carrier, which moves the grass in front of the mowing deck, causing them to fly away.

ProfiHopper 1500 Cab with InsectGuard

Confirmed:

the InsectGuard, depending on the test area, scared away up to 46% more insects, this is impressively documented by Elias Windmüller's master's thesis at the Institute of Agricultural Engineering at the University of Hohenheim.

UNIVERSITÄT HOHENHEIM | Institut für Agrartechnik

"Given the maximum loading height of 2.50 m, tipping over the side of a flatbed lorry was no problem."

PRODUCT FILM
ProfiMower SmartCut

PRODUCT FILM
BladeCut

1.5 or 1.8 m
cutting width

Up to 11 km/h working speed
and 20 km/h transport speed

High performance in green space maintenance when mulching

Amazone offers high-quality, reliable, high-performance professional machinery for lawn care and landscape maintenance when mulching, in the shape of the ProfiMower self-propelled mowers. The machines are characterised by their compact design, providing high manoeuvrability and user-friendliness for long working periods. A perfect cut is achieved using the SmartCut fine-flail mowing deck in a cutting width of 1.5 m, or, particularly on short grass, the BladeCut rotary mowing deck in a cutting width of 1.8 m. The mowing deck does not block, even when the cuttings are wet.

OUTPUT

High performing!

Impressive levels of output thanks to wide cutting widths, and a large fuel tank in combination with fast transport and working speeds.

FLEXIBILITY

Flexible!

Versatile applications – from mowing to scarifying and mulching.

Thanks to the canopy or cab, it is possible to work in any weather, on both short and long grass – the machine for all seasons.

COMFORT

User-friendly!

Convenient operation and control with a high level of visibility from the driver platform, including vibration and noise reduction.

Simple, tool-free replacement of the Y-blades, wing blades and scarifying blades.

Fatigue-free working

Mulch cutting deck for intensive shredding and even distribution

ProfiMower for efficient mulching

The new ProfiMower presents an efficient and practical solution for professional use in green space maintenance. The mower offers a high output platform for the economic maintenance of large lawns, where collection of the cuttings is not required. The finely shredded cuttings are deposited directly on the surface – ideal for extensive grounds, solar farms, sports fields, roadside verges and green space areas. The cuttings act as a natural mulch layer, protecting the soil and promoting the recycling of nutrients.

Cut – Roll – Mulch

The ProfiMower models can be fitted with either the SmartCut fine-flail mowing deck with exact cut rotor or the BladeCut rotary mowing deck. It is possible to exchange the mowing decks. On the SmartCut fine-flail mowing deck, the Y-blades are arranged in V-shaped rows and cut at the set cutting height with millimetre precision. The cut material is gently pressed down by a roller and remains on the ground as a mulch.

On the BladeCut rotary mowing deck, the rotating blades ensure a precise, high-performance cut. The cuttings are shredded several times and left on the surface as a mulch.

SmartCut fine-flail mowing deck with optional pendulum-suspended wing blades and press roller.

BladeCut rotary mowing deck with 3 rotor blades

ProfiMower

ProfiMower with BladeCut rotary mowing deck

Practical load platform

Instead of having a hopper, the ProfiMower features a practical transport platform integrated into the rear of the machine. It enables easy transport of tools, seed, safety barriers or maintenance items – during mowing, without the need for an additional vehicle. The load platform has a maximum payload of 400 kg. With its combination of efficient mowing, user-friendly operation and practical equipment, the new ProfiMower is the perfect choice for service providers, local authorities, contractors and businesses with a need for high outputs – wherever a neat result is required and where there is no need for the cuttings to be collected.

The cuttings remain on the mown surface as a finely-chopped mulch.

The load platform of the ProfiMower has 4 lashing eyes and high side walls and is designed for carrying work materials.

High performance

The efficient and clever drive system

High performance yet compact design

The ProfiHopper and the ProfiMower are compact and all the important components are within easy reach. This makes maintenance and cleaning a breeze.

1. Diesel engine
2. Self-cleaning radiator system

State-of-the-art engine technology – the standard of the future, right now

The use of high-quality components, such as robust diesel engines, are a feature of these professional machines. Thanks to the modern exhaust gas treatment with recirculation and particle filter, no DEF (Diesel Exhaust Fluid) is required.

AMAZONE Cooling-System – the clever cooling system

The AMAZONE ProfiHopper is fitted as standard with a self-cleaning, air-cooling system, that removes the build-up from the radiator grill of any plant residues that collect there, this is especially important when mulching.

The economical powerhouse – with automated engine management for the ProfiHopper 1500 and ProfiMower

Maximum power is available directly at all times thanks to the automated engine management system on the ProfiHopper 1500, ProfiHopper 1500 Cab, and ProfiMower. However, the engine works efficiently and economically when maximum power is not needed.

To make the most of the engine's power, a distinction is made between transport mode, work mode, and the all-new ECO mode meaning fuel consumption is optimised whilst ensuring optimum power utilisation.

STAGE V

Stage V exhaust emissions compliant

Area coverages of up to 15,000 m² per hour

ECO mode

In ECO mode, the rotor is driven at a reduced speed of 2500 rpm, and the revs of the diesel engine are at just 2000 rpm. This saves fuel and reduces the noise level by up to 4.5 dB. The ECO mode is ideal for collecting leaves and for mowing under easy conditions.

The benefits:

- Fast work and transport speeds.
- ECO mode for reduced fuel consumption and the large-capacity fuel tank give long working periods.
- Modern exhaust gas treatment without DEF.

Maximum forward speed in transport mode

The engine revs are determined exclusively by the forward speed in transport mode. Maximum forward speed is 20 km/h.

Increased performance in work mode

In work mode, the engine speed is increased to 2,800 rpm. The driving speed is then limited to 11 km/h. The perfect interaction of drive and engine power allows maximum work rates of up to 15,000 m² per hour, thanks to the 1.50 m cutting width.

Large fuel tanks – for those long, long days

Large fuel tanks with a capacity of 40 l for the ProfiHopper 1250 and 55 l for the ProfiHopper 1500, ProfiHopper 1500 Cab and ProfiMower guarantee uninterrupted operation, even during long working days and long periods of use: Less downtime, greater output, more flexibility.

HVO compatibility: the two diesel engines are suitable for use with sustainably produced HVO diesel fuel.

The intelligent all-wheel drive system

4WDi from AMAZONE

0-Radius turn steering

4WDi all-wheel drive

Equipped with intelligent 4WDi all-wheel drive, the speeds of the four driven wheels are individually controlled depending on the steering wheel position and the forward speed. The machine actuates the drive to the steered rear wheels only when the front wheels need this assistance. The system functions both when going forwards and when in reverse.

Benefits of the 4WDi technology

- 0-turn steering.
- Increased safety with maximum manoeuvrability.
- Also suitable for difficult operating conditions, such as when slipping on wet ground or when working on sloping terrain.
- All-wheel drive only when necessary: this reduces fuel consumption and protects the environment.

"The standard-size rear wheels turn through almost 90° with or without the all-wheel drive – the implement is therefore easily manoeuvrable and almost turns on the spot."

profi test report ProfiHopper 1250 – 09/2020

Safe on any terrain – even under difficult operating conditions

Also, when working under difficult operating conditions – for example, when slipping on wet ground or when working on sloping terrain – the operator benefits from the intelligent four-wheel drive in particular. The danger of slippage is minimised because every wheel is driven at all times at the optimum speed. This results in greater safety and improved operational performance, for example, fewer wheel marks on lawns.

The weather protection canopy offers protection from rain and sun for the ProfiHopper 1250, ProfiHopper 1500 and the ProfiMower.

Everything to hand with SmartHandling

Operation, maintenance and tool-free blade change of the SmartCut cutting deck

Simple, infinitely-variable cutting height adjustment ensures an optimum cutting profile at heights from 0 – 90 mm.

Central and easy cutting height adjustment

The cutting height adjustment is done very comfortably and quickly. The height of cut can be adjusted from 0 – 90 mm using the adjustment handle located on the mowing deck. Here, the whole mowing deck is swivelled so that no parts are project lower which could impact the quality of work.

Roll bar

The roll bar increases safety on very steep and hilly terrain.

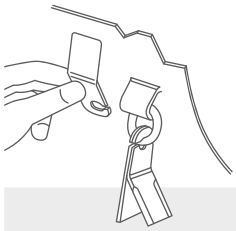

Easy access makes any maintenance work a pleasure to do. Thanks to the maintenance flaps, all important components are accessed quickly and easily.

Different blades for specific applications, interchangeable without the need for tools

The blades, made from durable special-purpose steel, ensure minimal wear and tear. In addition, the blade system is resistant to foreign objects because each blade is suspended independently. The blades of the SmartCut cutting deck can be replaced very easily without the need for tools, which also saves time.

Productive working

The driver's seat is a key element

Even the best machinery only realises its full benefit and functionality when it is operated professionally. This requires a high degree of comfort and user-friendliness in order to remain focused at all times, especially during long working hours.

It is precisely what the Profihopper and ProfiMower driver's seats provide: An intuitive layout with easy access to and convenient adjustment of the controls, as well as an ideal seating position with a clear view of the work area.

The optional cab on the ProfiHopper 1500 also offers air conditioning and protection from the weather, a radio and an optional reversing camera to provide a better view. Ideal conditions in the workplace!

"The standard seat with vertical and horizontal air suspension and heating was seen as a particular highlight."

8. Mowing deck and collection hopper controls

With comprehensive job documentation

Full operational documentation for the ProfiHopper 1500, ProfiHopper 1500 Cab and ProfiMower is available from the on-board computer for performance monitoring and utilisation analysis after the job has been completed.

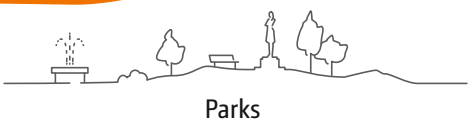

The year-round machine

Wide range of applications

The versatility of the ProfiHopper and ProfiMower makes them perfect for maintaining parks, cemeteries, residential areas, lawns and campsites, thus ensuring efficient machine utilisation. This is further enhanced by the facility for leaf collection.

The ProfiHopper is also suitable for the maintenance of high-quality grassed areas on golf courses, in paddocks and sports facilities plus, thanks to its lighting system and cab, it is also suitable for night-time operation – this very wide range of application, combined with its high output potential means that the machine can be operated very economically.

Mowing mastered

Mowing and scarifying in a single pass

The mower with an excellent profile of cut – whether the grass is short or long, wet or dry

Compared with either rotary or cylinder mowers, the ProfiHopper and the ProfiMower, with the SmartCut fine-flail mowing deck operate extremely reliably, thanks to its design, even at markedly longer cutting heights. Both in short and long grass, the machines provide a superb profile of cut – in virtually all weathers and vegetation coverage.

Machines fitted with the BladeCut rotary mowing deck are particularly suited to shorter grass.

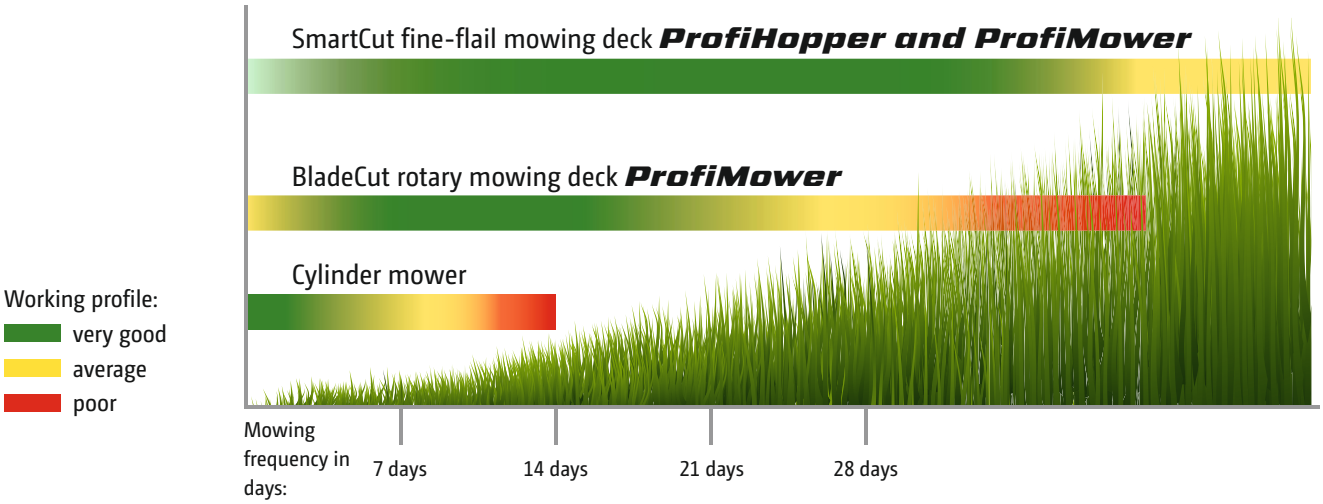

The AMAZONE mowing and scarifying system is your guarantor for well-groomed lawns. Whether the sun is shining, or the early morning dew is still on the grass – work gets going. The ProfiHopper does not care if the grass is wet, exceptionally tall or dense – it always produces first class results.

Mulching – returning important nutrients

The blades of grass are cut and repeatedly chopped by the SmartCut fine-flail cutting deck. The design of the ProfiMower without a hopper, and the mulch flap on the ProfiHoppers, enable the cuttings to be spread over a wide area, so that the nutrients are returned to the soil.

Scarifying – improving the soil structure

Machines fitted with the SmartCut fine-flail mowing deck can also be used for scarifying. The scarifying knives, which are quickly attached without tools, slit the turf and thin out the lawn's surface. Thatch is removed, collected and at the same time the surface is rolled. The scarifying and the improved light, air, water and nutrient exchange result in a significant improvement to the soil structure.

ProfiHopper

PRODUCT FILM
Collecting leaves
with the ProfiHopper

Thanks to the powerful suction effect, the ProfiHoppers are perfect for collecting and shredding dead leaves in autumn or spring.

Collecting leaves

The excellent suction provided by the ProfiHopper means that almost everything, such as dead leaves, chestnuts and acorns, is collected. This ensures optimum utilisation of the collection hopper capacity. In addition, the shredding of the leaves by the rotating blades speeds up their decomposition. Often in the spring, autumn leaves remain covering the ground and the grass can only grow with difficulty. To improve and aid that grass growth, those leaves can be collected, and the lawn aerated in a single pass by simply adding in the scarifying blades.

Around 45 % more collected material due to the compaction.

Rubbish collection – the clean-up machine

The ProfiHopper auger system is not sensitive to foreign objects, so the collection of cans, paper and other rubbish lying around in parks and leisure areas is no problem for the ProfiHopper.

In practise, the ProfiHopper is highly appreciated by livery owners. The ProfiHopper mows patches of rank grass and any horse droppings are reliably collected. Healthy animals thanks to clean paddocks.

Customer testimonials

Roger Myatt, Doncaster Golf Club, GB: 3 implements in one – the ProfiHopper 1250

Roger Myatt is the golf course manager at Doncaster Golf Club in the UK. He got to know the ProfiHopper 1250 at a demonstration a few years ago. The golf club team now uses the ProfiHopper 1250 for more and more jobs. The decision to buy the machine was taken almost 2 years ago. The ProfiHopper is a real benefit because it carries out all the required tasks. “We like the ProfiHopper because it can perform any task required of it. Here at the club, the PH 1250 is being used to maintain the heath areas and, through scarifying, we promote seed germination of the grass. It also thins out those areas with thick, tall grass and we use it to collect leaves in the autumn,” explains Mr. Myatt. The ProfiHopper has improved the characteristics of the heath land where the rough has been cut and thinned out, these surfaces have become easier to play.

It keeps the falling leaves in check and, because the PH 1250 is so compact, it fits between the trees and so collects the majority of the leaves which can then be easily emptied into trailers. Roger Myatt goes on to add “What we particularly like about the ProfiHopper are the simple things; the height adjustment, its manoeuvrability between the trees and the high-tip emptying (up to 2.10 m)”. The technical plus point, and the deciding factor, according to Roger Myatt for choosing the ProfiHopper, was the fact that he has 3 machines in one: leaf collector, grass cutter and scarifier. “I would certainly recommend the use of an AMAZONE ProfiHopper 1250 for golf courses, even the club members are impressed by it," he concludes.

Landscape gardeners with a clear recommendation for the ProfiHopper 1500

Landscape gardeners Michael Hauner and Thomas Schehl (UBZ) have been associated with the ProfiHopper 1250 for years. They have been a test customer for the prototype phase of the ProfiHopper 1500 since November 2020.

They find the new cab, with its easily adjusted air conditioning, to be a most useful asset. “The cab demists in 3 minutes.“

Michael Hauner considers the seating comfort to be very important to him because of slipped disc problems in his back. He enjoys driving the ProfiHopper, with its air-suspension seating, whether it be on the road or on rough terrain.

The ProfiHopper replaced a large number of other units at UBZ because of its ability to be used on large areas (stadiums and parks) and on the smallest of applications (wild flower meadows). They also use the ProfiHopper on verges, school playing fields, playgrounds, water-side tracks and asphalted areas. “We can collect everything or, if needs be, mulch it as well. We also collected lots and lots of leaves." They cite the machine's enormous capacity and high

Arnaud Paillard with his ProfiHopper 1500 4WDi SmartLine

Arnaud Paillard “Parcs et Jardins Paillard”: a loyal ProfiHopper user

Arnaud Paillard, Managing Director of “Parcs et Jardins Paillard” in Pugey near Besançon, France, is an enthusiastic ProfiHopper user. “I have been using a ProfiHopper since 2000, so I was working with the first versions, when it was still called the LGA and steered with 2 levers. I went for the ProfiHopper because of its collection system and its versatility. Collecting is still the best, and no noise! Within the business, I use it for mowing, collecting, leaf collection and also for shredding material. The ProfiHopper is quick, quiet and very compact. In addition, you have a good all-round view from the driver’s seat, which makes manoeuvring much easier.”

M Paillard is, and remains, a loyal customer because “AMAZONE is always prepared to listen to professionals and they take account of our requirements in the conception and development of their machines, and that’s why I am a fan of the brand.“

M Paillard currently operates a ProfiHopper SmartLine 1500 which he obtained in February 2020.

manoeuvrability as further advantages of the ProfiHopper. They also praise the changing of the blades as being very easy, together with cleaning and maintenance. The cutting height adjustment is very simple and is easily accessible. The generously dimensioned diesel tank generally lasts for approximately 1.5 days, on average. Even when covering 4 km of verges, the ProfiHopper saves lots of extra work. "We can manoeuvre close to the trees and hardly have to do any follow-up work or mow by hand."

Michael Hauner (left) and Thomas Schehl from Umwelt- und Servicebetrieb Zweibrücken

ProfiHopper 1250, ProfiHopper 1500 and ProfiHopper 1500 Cab

The benefits

- High-output, self-propelled mowers/collectors featuring a fine-flail mowing deck, PowerCompactor auger conveyor system and high-lift discharge for quiet, efficient operation.
- Highly versatile, it can be used for mowing, scarifying, collecting and mulching, as well as for collecting leaves, horse droppings and litter.
- The ProfiHopper 1500 and ProfiHopper 1500 Cab can also be fitted with the BladeCut rotary mowing deck, which is designed as a mulch cutting deck with a cutting width of 1.8 m. Both mowing decks are interchangeable.

PRODUCT FILM
ProfiHopper Cab with BladeCut

730 or 1,100 l
hopper capacity

1.25 or 1.5 m cutting
width

Up to 11 km/h working speed
and 20 km/h transport speed

ProfiHopper 1250

Quick and highly-manoeuvrable – the ProfiHopper 1250 offers high work rates and maximum consolidation of the cuttings in the collection hopper thanks to its PowerCompactor – the effective capacity of the hopper is increased from 730 l to up 1,000 l of collected cuttings. More mowing, less downtime.

ProfiHopper 1500

The high work rate of the ProfiHopper range is further enhanced by the ProfiHopper 1500, having a wider cutting width of 1.5 m and a collection hopper that can hold up to 1,600 l of compacted cuttings. Even more mowing, even less downtime.

ProfiHopper 1500 Cab

The cab for the ProfiHopper 1500 offers an all-round glass area, external mirrors, wide access doors, a heater and air conditioning. Additional equipment, such as road lights, flashing beacons, a radio, a high-spec seat and additional LED work lights, make the ProfiHopper 1500 the optimum choice for intensive use.

"The ProfiHopper 1500 Cab is a high-performance standout in the field of lawn maintenance; with its leaf collection function and the option to change the mowing deck, it is an implement that can be used all year round."

ProfiMower

with SmartCut fine-flail mowing deck or BladeCut rotary mowing deck

The benefits

- Self-propelled mowers with a fine-flail mowing deck or rotary mowing deck without a collection hopper, designed for situations where the operator deliberately chooses not to collect the cuttings
- The finely shredded cuttings are deposited directly back on the surface – ideal for extensive areas, solar farms, sports fields, roadside verges and green space areas

1.5 or 1.8 m
cutting width

Up to 11 km/h working speed
and 20 km/h transport speed

ProfiMower with SmartCut fine-flail mowing deck

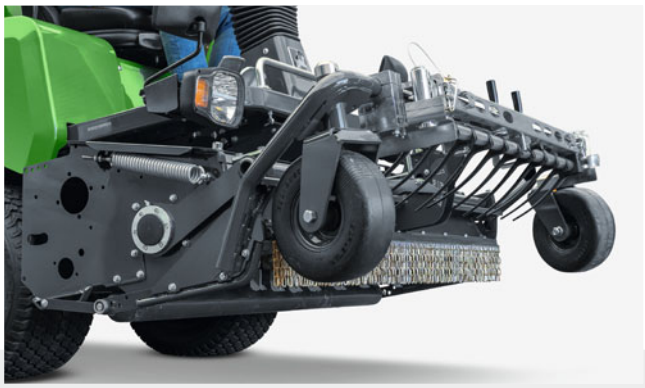

Reliable mowing in both short and long grass, with a wide cutting width of 1.5 m and continuous mulching.

ProfiMower with BladeCut rotary mowing deck

A wide cutting width of 1.8 m for efficient, even mowing of large lawns without collecting the cuttings.

The mowing deck on the ProfiMower, including the InsectGuard, can be moved from the transport position ...

... to the working position and put it into use in a matter of seconds.

The right solutions

Equipment for every application

LED work lights and/or flashing beacon

Reversing camera for more visibility[3]

LED rear lights form part of the road lighting kit

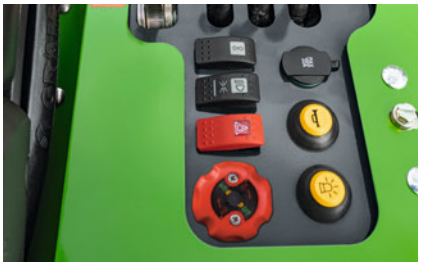

Road lighting kit

Extra wide lawn tyres are available on request[1]

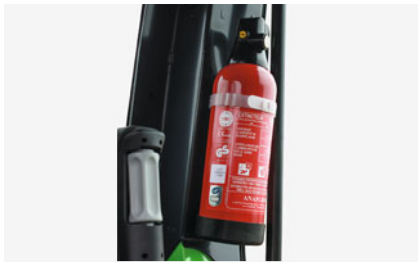

Weather protection canopy[1+2+4]

Battery isolator[1]

Various seat options, such as the Grammer “De Luxe” seat with air suspension and heating

Fire extinguisher[2+3+4]

All machines are optionally available equipped for use on the public road.

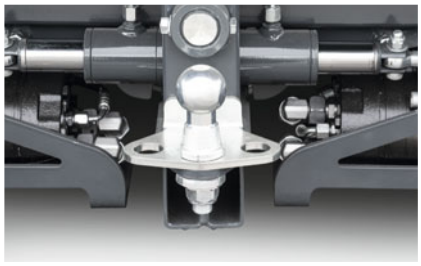

IDEAS FOR OUR FUTURE

InsectGuard – ecologically-friendly mowing and insect protection at the same time!

The tine carrier of the new InsectGuard vigorously agitates the grass before the mower passes over it, thereby scaring any insects away. As a result, they are safe from the passage of the ProfiHopper. Available for the ProfiHopper 1250, ProfiHopper 1500, ProfiHopper 1500 Cab and ProfiMower with Smart-Cut cutting deck.

InsectGuard

Trailer coupling, complete with lashing points[2+3+4]

The run-flat tyres provide more protection when working

Polyurethane-coated support roller

Edge protection for safe transport[1+2+4]

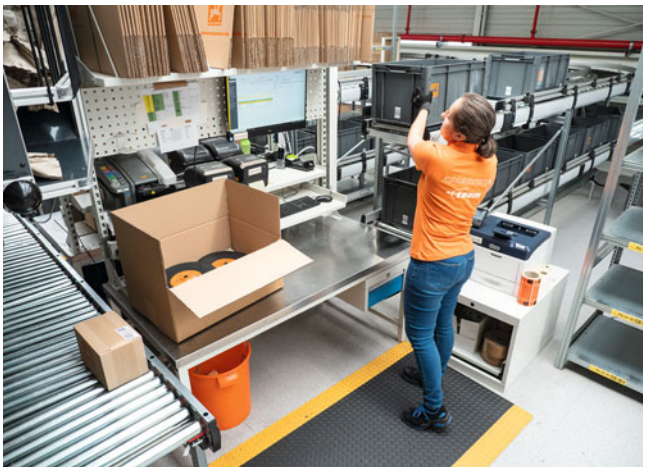

Lift arm protectors[2+3]

1. Optional extras for the ProfiHopper 1250
2. Optional extras for the ProfiHopper 1500
3. Optional extras for the ProfiHopper 1500 Cab
4. Optional extras for the ProfiMower

The original is simply better

AMAZONE service and quality

Experience that pays off. That's why AMAZONE guarantees you the highest quality thanks to a very high level of vertical integration within its own factories in Europe – and it has been doing so for more than 140 years. The original is simply better.

Mostly, things have to be done in a timely manner, such as for upcoming events that use those green spaces. That is why AMAZONE offers a first-class parts service with genuine parts that are precisely matched to your machine. So your machine is always ready for use – quality parts and available worldwide.

The parts centre in Tecklenburg-Leeden in Germany is the base for our worldwide parts logistics system. This ensures the optimum availability of parts, even for older machines. Whenever you need us, the AMAZONE service team is there for you, supported by a network of competent and highly trained sales partners and service technicians.

The benefits of genuine spare parts and wear parts:

- Quality, reliability and performance
- Immediate availability, even for older machines
- Higher resale value of your used machine

Technical data:

ProfiHopper and ProfiMower self-propelled mowers/collectors

Model	ProfiHopper 1250	ProfiHopper 1500	ProfiHopper 1500 Cab
Drive system	Hydrostatic, all-wheel drive, 4 hydraulic motors and 2 hydraulic pumps	Hydrostatic, all-wheel drive with double piston pump with electronic control	
Weight with mowing deck	1,175 kg	1,770 kg	2,100 kg
Total permissible weight	1,600 kg	2,600 kg	
Engine	Rehlko diesel, water-cooled, 3 cylinder, 1,068 cm^3, 18 kW (24.5 hp), Stage 5 exhaust emissions compliant	Yanmar 4TNV 88 diesel, water-cooled, 4 cylinder, 2,190 cm^3, 34 kW (45.6 hp), Stage 5 exhaust emissions compliant	
Fuel tank capacity	40 l of diesel	55 l of diesel	
Forward speed	Forwards: 0 to 12 km/h, infinitely variable Reverse: 0 to 6 km/h, infinitely variable	Forwards: 0 to 20 km/h, infinitely variable Reverse: 0 to 8 km/h, infinitely variable	
Working speed	0 to 10 km/h, infinitely variable	0 to 11 km/h, infinitely variable	
Cutting width	1.25 m	1.50 m	
Mowing deck	SmartCut rotor with 72 blades (36 pairs)	SmartCut rotor with 88 blades (44 pairs)	
Cutting height adjustment	Infinitely variable from 0 – 90 mm		
Dimensions with mowing deck	Length: 2.85 m · Width: 1.50 m height (with folding roll bar): 2.10 m	Length: 3.41 m · Width: 1.77 m Height: 2.19 m	Length: 3.41 m · Width: 1.77 m Height: 2.467 m
Hopper capacity	1,000 l collected material (= 730 l compacted in the hopper)	1,600 l collected material (= 1,100 l compacted in the hopper)	
High-lift discharge	2.10 m	2.50 m	
Tyres	Front: 20 x 10.00-10 6PR or 21 x 11.00-10 4PR or 20 x 12.00-10 4PR Rear: 16 x 6.50-8 4PR KEVLAR	Front: 24 x 12.00-12 8PR Rear: 20 x 10.00-10 6PR
